

---

The Regional influenza and acute respiratory diseases control staff took a decision to cancel all antiepidemical and restrictive measures related to the announced epidemic in Burgas region. According to information of the Regional Health Inspectorate a significant decrease in the sick levels and a tendency to normalization of situation is observed. In the time-period 26-29 January a sick rate of 96,80 or 193 incidences have been registered and the prognosis till the weekend is that the levels will reach under the epidemical rates.
